

David C. Adamian, PE, LEED AP

David Adamian is the President and CEO of GreenerU. He has over 20 years of diverse experience in the energy efficiency business. His experience spans a broad range of technologies and applications and also covers the spectrum vertically from field engineering to corporate management.

At GreenerU, David has overseen the growth of the staff and the companies' capabilities in energy engineering, change management, project management, data analytics and building controls. He has provided executive oversight of all of GreenerU's work on over 20 client campuses.

David has Prior to joining the founding team of GreenerU, David established and ran an engineering consulting firm, Adamian Energy Solutions, LLC, for over 2 years - providing energy planning and energy engineering services to commercial, industrial and institutional clients. Projects included feasibility analysis and preliminary engineering for a \$65 million repowering of an urban district energy facility, a feasibility study evaluating options for a 13 MW power plant and 10 mile thermal distribution system serving a major military facility, and energy audits of multiple research facilities for a large urban medical school. Before beginning his company, he served as Vice President for Carter & Burgess, a major national engineering firm.

Previously, David served as a manager, senior engineer and energy specialist in his 13-year tenure at HEC/Select Energy Services. He joined HEC in 1993, (which became Select Energy Services in 2001) as an energy engineer. David spent several years conducting energy audits and developing, designing and implementing energy efficiency projects for commercial, industrial and institutional clients. During this time, he developed expertise in a wide variety of building HVAC systems, large chiller systems, and cogeneration systems. He also spent significant time in Japan, as the lead consultant assisting a Japanese electronics manufacturer in establishing an energy services company in that country.

In 2001, David assumed P&L responsibility for Select's \$20 Million New England operations. In this role, he managed a staff of 25 energy professionals in a variety of roles. His key projects at HEC/Select Energy Services included:

- A major HVAC upgrade at a 400,000 square foot university laboratory facility, including high-efficiency chillers, redesign of the chilled water distribution, and a major laboratory ventilation controls upgrade.
- A two-phase, \$44 Million performance contract at a major military facility including a 10 MW of cogeneration project with 4 MW of back-up power generation, a redesign of the power plant steam system two new 70,000 MMBTU boilers, modernization of the power plant control systems, thermal distribution system improvements, shipyard-wide lighting upgrades and other initiatives.
- A \$10 Million performance contract encompassing a wide range of energy efficiency improvements throughout the campus. This project was selected by the State of Massachusetts as Best Energy Project of the Year.

After Ameresco acquired Select Energy Services in 2006, Mr. Adamian became Director of Operations, overseeing ongoing operations at several large military and cogeneration facilities where Ameresco retained on site staff for operations, maintenance and performance verification

David began his career in the energy business in 1991, working as an energy engineer for D.K. Smith and Associates, a small consulting firm in Stoneham, MA. In this role he developed expertise in lighting systems and building energy modeling.

David is a registered Mechanical Engineer in the Commonwealth of Massachusetts and a LEED Accredited Professional. He holds a BA in energy studies from Hampshire College.
